"This is a work of great interest, from one of the most learned and accomplished writers of the age, revealing the mysteries of the world in which those live who have been deprived of the sense of sight or hearing. Ever since his boyhood, for more than thirty years, Dr. Kitto has passed a life of great activity as a scholar, in a state of the most intense deafness to which any living creature can be subjected. His account of himself, and of his discriminating remarks on the condition of the blind, (James Mitchell, Laura Bridgeman, and others,) are replete with profound thought on the interesting phenomenon presented in the progress of their mental training,"—Christian Observer. MACHINE FOR CRUSHING, GRINDING, AND PULVERIZING.

Recently Patented in this Country and Europe.

COCHRAN'S PLANOSPHERICAL QUARTZ CRUSHING AND PULVERIZING MACHINES are now in daily operation for the inspection of the public, and will be submitted to any reasonable practical tests proposed by parties interested.

These machines, by their simplicity of construction, their durability, the undoubted principles upon which they operate, their effective operation and result, are justly entitled to the consideration of all parties engaged in grinding, crushing, and Pulverizing Quartz, Iron Ore, Zinc, Copper, and Lead Ores, and all other Ores or Mineral substances.

It is the peculiar feature of the economy of these machines that they are found capable of crushing and pulverizing into the finest powder any amount of Quartz or other earthy matter, in proportion to the amount of weight or power applied. The earthy matter is so completely ground and pulverized, that the Gold may be easily separated, and subjected to any process of amalgamation that may be necessary.

The machines work and deliver wat or dry, as may be re-

subjected to any process of smangaments and any processory.

The machines work and deliver wet or dry, as may be required, and run with little friction, (being almost without machinery,) requiring no lubricating; the principle upon which they operate precludes the possibility of their being put out of order; nor do they heat any material while being pulverized. They are at once applicable for all purposes of grinding and pulverizing, from these required by the Drugist to those of the most extensive operations in California and Australia.

gist to those of the most extensive operations and Australia.

These machines are from two to twelve feet in diameter, with balls or spheres from three inches to five feet in diameter, each mashine weighing from 250 pounds to 20 tons each, and are sold, with the right to use them, at from \$100 arch.

eter, each mashine weigning from 200 pounds to 20 tons each, and are sold, with the right to use them, at from \$100 to \$5,000 each.

They can be worked by eteam, water, horse or manual power, according to their size; and by changing the velocity and proportioning the weight on the top of the balls, any desired amount of power may be used, from that of a man or horse upward.

The proprietors of this invention solicit examination, and will prove by practical tests the vast superiority and economy of these machines over any other, for crushing, grinding, or pulsarizing, heretofore offered to the public.

These machines may be seen in operation at the foot of South Eighth Street, Williamsburgh, at the large Patent Block and Saw Factory of Messrs. Burr, Waterman & Co., first street south of Peck Silp Ferry, every day, from 7 to 9 a.m., and from 4 to 6 p. m. For further particulars, apply to

KRAUSER'S PATENT CLOVER-SEED HAR-

VESTER
BEFORE THE PUBLIC FOR THE FIRST TIME
To utility in beyond comparison with any other farming
implement now in use. It takes the seed from the field, implement now in use. It takes the seed from the field, leaving the straw or grass all standing. It weighs two hundred and fifty pounds, is drawn by one horse, and gathers from ten to twelve acres per day. The fingers, or teeth, gatch all the heads, the revolving knives cut them off and throw them back into the box, which will cross a twenty-acre field without emptying. The heads are then loaded into a wagon and taken directly to the mill for cleaning, thus diminishing the labor three-fourths, and saving all the seed. This machine comes so low that every farmer will have it, and pays the manufacturer 300 per cent.

E. WHEELER, Agent for Washington.

CROSS KETS, WASHINGTON TOWNSHIP, CAMDEN Co., N. J.,) September 4, 1851.

CROSS KETS, WASHINGTON TOWNSHIP, CARRESTON, 1851.

We, the undersigned, do certify that we have seen Mr. Krauser's Patent Clover Harvester in operation, and it has given perfect satisfaction. It has gathered many of the farmers clover in this neighborhood—it is all that Mr. Krauser and his bills represent it to be. The farmers have given one-half for gathering and threshing. JOSEPH DEWALD. JAMES D. TIMBERMAN, WILLIAM P. GARWOOD,

JOHN F. COOK, JAMES B. COOK, JAMES COLLINS, CHARLES LEWIS. PETER H. JONES. THOMAS TUMBLESON,

Long-a-Comins, October 7, 1851.

This is to certify that Mr. G. J. Naylor has gathered clover off of a sixteen-acre field of mine, which has been pastured two months with ten head of cattle, and it produced six bushels and a half and one peck of seed. I gave him two-thirds for gathering and cleaning. I think his machine is first-rate, and answers all the purpose that is intended.

NEHEMIAH NICHOLSON.

The following points out the profitable nature of the Harvester:

The following points of the Harvester.

Harvester's PATENT CLOVER-SEED HARVESTER.—
We have conversed with a number of Farmers, and they are of opinion that there are at least 3,000 acres in each township in Camden or Gloucester county, New Jersey. Admiting there are but 1,000, it is said that each acre will yield from 11/2 to 3 bushels. Reducing it to a certainty of yielding but 1 bushel per acre, what will it cost to gather and thresh 1,000 acres!

Cost of harvesting, &c., 1,990 acres.....

have found them to agree unanimously with the affive calculation.

Perhaps no invention offers greater inducements for a
profitable investment than the Harvester. For an enterprising young man, of good business habits, a large sum of
money could without doubt be realized from the sale of
rights in the different states of the Union not yet disposed
of. By calling at this office, it can be demonstrated satisfactorily that men of moderate capital could not choose a better
or more money-paying business.

Those who wish to see a model of this celebrated farming
implement, and the-attisfactory manner in which it operates,
can do so by calling at

E. WHEELER'S,
Opposite Browns' Hotel.

N. B.—The subscriber has purchased the right for Montgomery county, Maryland.

DISCOVERED AT LAST!

M. B. SCHLESINGER has invented a Metallic Pen which supplies a want long existing. It is coated with gutta percha, and most effectually resists the corresive properties of the ink, and, being pointed with platina, has all the flexibility and smoothness so desirable in writing. It is equal in all respects to the most highly finished diamond-pointed gold pens, and is to be had at a price so reasonable that it must come into universal use. ust come into universal use.

This highly useful and desirable pen has been tested already in this city in engressing on parchmost, and in rdinary business writings, and its superiority is fully ad-The sole agent in this city is

JOE SHILLINGTON,

Transition Coal.

This rare and valuable Coal is a variety not quite changed into an anthracite, and it has only been discovered (in large quantities) at three places upon our globe, viz: at South Wales, Great Britain; at Donets, in Russia, near the Black Sea; and at Dauphiu and Lebanou counties, Pennsylvania. In the London market this coal commands the highest price. It is now mined upon the large estate (43,000 across) of the Dauphin and Susquehamsa Coal Company, situated in Pennsylvania, and it is nearer to the cities of Baltimore and Washington than the coal of any other region. For easy ignition, durability of fire, complete combustion, easy adaptation to the temperature of the weather, and its great power in generating heat, it is the meer coal in the world. It has the inflammability of the bituminous coal, with the cleanliness of the anthractic, and a greater durability than either. It burns without making any soot or visible smoke, and the combustion is so complete that it retains the fire until all the coal is consumed. Not so with the anthractice, especially the hard and heavy kinds. They do not burn up, and hence the common troublesome practice of sifting their aches to obtain more fuel. In burning the Transition Coal there is no worde, for the small coals made by handling, burn as well as ordinary coal. All should be burned together. If screened at all the dust only should be taken out.

A very erroneous impression exists with many persons that the heavy tent of the common trouples or primer to that the dust only should be taken to the surface of the common trouples or primer to the tent out. Transition Coal.

A very erroneous impression exists with many persons that the heaviest costs are the most economical for ordinary purposes. This might be the case if costs were sold by measurement, but never when they are sold by winer. In Taylor's valuable work, (Statistics of Coal,) the details are given to show that 31 pounds of a free-burning red ash yielded more heat to a room in 15 hours, than 37 pounds of a heavy white ash coal, making the red ash, at \$5 50, to be more economical than the white ash at \$4 61 per ton. Any person accustomed to use these heavy coals will be astonished at the saving which can be made in burning the lighter kinds, when tested by the weight and burnit in a suitable manner.

An apprehension exists with some the state of the contraction of the saving when the saving the saving

rekinds, when tested by the excipit and burnt in a suitable manner.

An apprehension exists with some that the free-burning coals have a tendency to clinker. Now, as a general rule, no coal will clinker unless a greater draught be applied to that the coal naturally requires. No one would think of applying a bellows constantly to a fire made of seasoned hickory or oak wood, and it would be equally as absurd to apply a bleat constantly to a free-burning coal. But the heavy white ask anthracites cannot be burnt without a powerful draft, and without using a larger quantity of coal than the temperature of the weather sometimes requires. Various pat terns of stoves, furnaces, cooking ranges, &c., are invented annually to conquer this difficulty, but it has never been done with complete success. In every contrivance, however, which has been invented to burn coal, the transition variety will make a beautiful fire, and no complaint will ever be made to a manufacturer or seller of grates or stoves when this coal is used. The draft alone is to be regulated by a damper. In introducing this new coal for the first time, prepared as it now is by steam power machinery for domestic use, it may give greater confidence to the buyer to say that the celebrated free-burning red ash veins in the Peach Orchard district, near Pottsville, are a continuation of the Dusphin veins, and they approach the nearest in value to the Transition coal.

Shipments of the Transition coal have already been made to the District of Columbia, and it can be obtained at retail from the following persons:

Wm. T. Dove, Washington. Woodford Stone, Washington.

to the District of Columbia, and it can be obtained at retail from the following persons:

Wm. T. Dove, Washington.

F. Magruder, do Huneberger & Co., do Myers & Baker, Georgetown.

Orders for this coal by the cargo, as well as for the semibituminous and anthractic coals, mined by the Dauphin and Susquehanna Coal Cempany, will be promptly executed by ADAMS FOSTER, Agent,

Office southwest corner Baltimore and South sts.

Baltimore, Sept. 15, 1852. [sep 16—1m]

NEW SEVENTH STREET BOOK-STORE. REW SEVENTH STREET BOOK-SIGKE.

CRAY & BALLANTYNE having secured commodious and conveniont premises in Seventh street, two doors above Odd-Fellows Hall, (opposite the old stand of A Gray,) offer a new and beautiful assortment of Religious Books, selected with great care by one of the firm, to which they invited the attention of the Christian public.

They would also respectfully state, that having become the general agents in this city for the sale of the publications of Robert Cantra & BROTHERS, and of the METHODIST BOOK CONCERN, they will always have a complete supply of their respective publications on hand.

They will also keep a general assortment of the publica-

tions of Robert Carter & Rectrees, and of the Methodist Boot Concern, they will always have a complete supply of their respective publications on hand.

They will also keep a general assortment of the publications of the Presbyterian Board, American Tract Society, American Sunday School Union, &c.

Their assortment of Juvenus Boots, and Works suitable for Sunday School Libraries, will be very extensive.

The Depository of the Washington City Bible Society is transferred to their store. Neat Bibles at 25 cents, and Tootaments for 6½ cents.

It will be their ambition and pleasure to keep such an assortment of Religious Books as will entirely supply the increasing demand for this kind of literature.

They earnestly solicit the co-operation of Christian friends in the great and important work of widely circulating this class of publications, and thus counteracting, in some degree, the deleterious effects of the light and corrupt reading that is flooding the country to such a fearful extent.

In suddition to their extensive assortment of Religious Books, which comprise all the best standard and miscellaneous works of that class, they will keep constantly on hand a great variety of valuable Historical, Miscellaneous, and Juvenile Works of unexceptionable character; Books of Sacred Music; Hymn Books, such as are used in all the different Churches; Bibles and Prayer Books, in every variety of binding, and at all prices; Albums, Annuals, and beautiful Giff Books; splendid Family Bibles; and School Books of every kind in use, at the lowest prices.

Blank Books and superior Stationery in great variety, Pocket Knives, Porto-Monnaics, Portfolios, Writing Desks, superior Gold Pens, and a variety of Fancy Articles.

Protection from Lightning.

Protection from Lightning.

The undersigned, being the duly appointed Agent of Spratt's Electrican and Electro-Mitallurgiet Learnning-Roo Manufactory, Covington, Kentucky, bega to offer these superior Rods, of Sprint-twited, Carbonized Annealed Iron, with Zine Protectors, and Electro-positive elements combined in their manufacture; thus rendering them equal to copper as conductors. They are in ten-feet lengths, with accurately-fitted brass-screw connecting joints, an entire new style of metallic (patented) attachments, for brick or frame buildings; also, glass isolaters, of a novel and ingenious construction, (patented), forming a lock; the whole mounted with a solid platinum silver point, (patented), twelve inches long, surrounded at the base with three angular negative magnets, which possess the power, to an extraordinary extent, of discharging the opposite elements of the most fearful thunderstorm, and embrace the entire perfection of science up to the present time; the whole constituting the most magnificent and perfect silent conductor ever presented to the public.

Safety has not been compromised by affording these excellent rods at such low rates; the greatest attention has been given to their construction, so as to be readily attached. The astonishing power of the negative magnets, in discharging the air of its opposite elements, has been clearly demonstrated by the Electrometer, when unmagnetized points have shown but elight results, though placed under the same conditions. In fact, they gather and silently discharge electricity from the atmosphere when you would scarcely suspect any being present.

These improvements being secured by double letters patent, you are hereby cautioned against laying yourselves liable, by purchasing of those who are not authorized, or who are substituting inferior imitations. All agents duly appointed can show their certificates. Have good rods or none.

I do hereby certify that I have app lied various powerful chemical reagents to Spratt's Patent Points for Lightning.

I do hereby certify that I have applied various powerful

to combining durability, cheapness, and efficacy, I deem it equal, and I think superior, to any other rod ever offerred for my inspection.

Prof. JAS. V. Z. BLANEY.

AUGUSTA, (GA.) November 11, 1850.

This will certify that I have examined the Lightning Rods, Metallic Points, and Isolating Attachments, manufactured by Mr. Spratt, and regard them as constructed in conformity to the general laws of the electric fluid; and the metallic compound constituting the Points, as promising, from the result of several tests to which they were submitted, to resist for years the action of those atmospheric causes most likely to corrode them.

A. MEANS,

Prof. Phys. Sc., Emory College, Ga., and Prof. Chem. and Pharm., Medical College, Ga.

The Lightning Conductors put up by Mr. Hepry M. Smith, of this city, on the plan of Mr. Spratt, appear to me to be very well devised; and, in point of mechanical construction, are the best I have ever seen.

It is to be boped that the use of these Reds may become general, as an important auxiliary defence against a danger which must be regarded as of no ordinary magnitude, to which all buildings are liable.

Prof. of Chem. in the University of Louisville.

LOUISVILL, January 27, 1851.

All orders left at ANDREW DUFFY'S Stove Manufactory, 7th street, will be promptly attended to; or at GEGRGE BELLYS, Alexandria, Va., corner of King and St. Asaph sts.

Sep 29

GRAY & BALLANTYNE, 7th #.

Autre Conference.
"I like Revival Miscellanies very much. It will do good in the church."—Rev. G. M. Curpenter, of Providence Con-

I do hereby certify that I have app lied various powerful chemical reagents to Spratt's Patent Points for Lightning-Rods, and that the results of these experiments convince me that they will resist the action of atmospheric causes, and thereby preserve the extremity sharp—a condition most essential to protection against lightning. The reagents used in the above experiments were a solution of chloride of se dium, (common sait,) acetic acid, sulphuric acid, and hydrochloric acid. With the first, there was no action on the metal; with the several acids, there was very slight—a fact sufficient to show that atmospheric influences would have no sensible effect.

UNIVERSITY OF GA., October S, 1850.

The Lightning Conductors of Mr. Spratt, offered to me, are well calculated to perform the office for which they are intended. Yours, truly,

Exercetors, Kr., February 20, 1850.

CHICAGO, September 3, 1850.

This may certify that I have examined, somewhat critically, James Spratt's Patent Lightning Rods, and that I am of opinion that it is constructed on scientific principles. For combining durability, cheapness, and efficacy, I deem it equal, and I think superior, to any other rodever offered for my inspection.

Prof. JAS. V. Z. BLANEY.

AUGUSTA, (GA.) November 11, 1850.
